

MERIEM ABUBEKER

Senior Software Test Engineer

Addis Ababa, Ethiopia • +251 912 657 852 • bintabibekr@gmail.com • LinkedIn • GitHub

◆ PROFILE

Senior Software Test Engineer with 10+ years of experience delivering high-quality enterprise software across eCommerce, FinTech, ERP, SaaS, AI-driven, web, and mobile applications. Builds scalable automation frameworks from the ground up using Playwright, Cypress, Selenium, Appium, and Rest Assured, applying risk-based testing and root-cause analysis to keep releases reliable at scale. Actively leverages AI tools — ChatGPT, GitHub Copilot, and Cursor — to accelerate test case generation, test data creation, and automation code development. Deep domain expertise across cross-border remittance, digital lending, payment processing, eCommerce, and large-scale, multi-module ERP and SaaS platforms.

◆ CORE SKILLS

Functional Testing	Integration Testing	System Testing	Regression Testing
UAT	Exploratory Testing	API Testing	Database Testing
Performance Testing	Security Testing	Mobile Testing	Playwright
Cypress	Selenium WebDriver	Appium	Rest Assured
Serenity/Cucumber	JMeter	k6	OWASP ZAP
Burp Suite	Postman	Java	Python
TypeScript	Oracle	PostgreSQL	MongoDB
SQL	Jira	Xray	Zephyr
TestRail	TestLink	Docker	Jenkins
Git/GitHub	SonarQube	JFrog Artifactory	GlassFish
AI-Assisted Testing	ChatGPT	GitHub Copilot	Cursor

◆ PROFESSIONAL EXPERIENCE

Oct 2025 – Present

Kenya (Remote)

Senior QA Engineer

Roamtech Solutions

QA consultant delivering testing services with full ownership and autonomy across multiple client engagements, working remotely for this Kenya-based company.

- Uses AI tools (ChatGPT, GitHub Copilot, Cursor) daily to generate test cases and test ideas, create test data, and accelerate automation code development across client engagements.

Project: Adenzo — eCommerce Platform

- Performed end-to-end QA across a React-based storefront and backend/middleware REST APIs, covering product catalog, cart, checkout, and order management workflows.
- Validated storefront functionality across devices and browsers to ensure a consistent experience throughout the purchase journey.
- Tested REST API integrations between storefront and middleware services for inventory, pricing, and order processing.
- Executed regression and exploratory testing ahead of releases to catch defects before they reached production.

Project: Emalify — SaaS Platform with WhatsApp Business API Integration

- Built a Playwright/TypeScript API automation framework for Emalify's staging environment, with a shared HTTP client layer and per-resource client modules.
- Tested WhatsApp Business API template creation, validation, and message delivery to clients using approved templates.
- Validated the 24-hour client messaging window, including chat expiry and automatic resumption once the client sends a new message.
- Tested conversation assignment workflows, verifying chats were correctly routed to and picked up by support agents.
- Designed reusable API response wrappers, worker-scoped fixtures, and Faker.js-based test data generation to keep the automation suite reliable and maintainable.

Project: TumaTuma — Cross-Border Remittance Platform (Mar 2026 – Present)

- Built the automation test suite from the ground up for cross-border remittance workflows, covering functional, integration, regression, and end-to-end testing.
- Validated money transfers, exchange rate calculations, transaction fees, and payout status updates.
- Performed API testing for remittance, KYC/ID verification, and payment integrations; verified WebSocket and webhook flows.
- Executed database validation for transaction integrity and conducted risk-based exploratory testing on payment edge cases, applying root-cause analysis to distinguish product defects from automation issues.

Project: Senti — Micro-Credit Platform (May 2026 – Present)

- Validated onboarding, loan application, approval, disbursement, repayment, and

Apr 2023 – May 2025

Addis Ababa, Ethiopia

- reconciliation workflows.
- Tested administrative CRB and compliance processes; verified RBAC across modules.

Senior QA Engineer

Gebeya Inc

Project: Gebeya SaaS Marketplace (GSaaS) — a multi-tenant SaaS marketplace enabling rapid tenant onboarding

- Automated smoke and regression test suites in Cypress; validated REST APIs and performed database verification to ensure data integrity.
- Tested multi-tenant provisioning, role-based access control (RBAC), and user permission workflows (.NET Core, React, Permify RBAC).

Project: Safaricom Talent Cloud – end to end talent development platform

- Validated and tested the Pluralsight integration by creating data-driven test scenarios to verify learning-path progress.
- Executed end-to-end tests for Discord-based coaching workflows.
- Developed and maintained Playwright-based smoke and regression suites.
- Validated SAML-based SSO flows for seamless, secure access to Pluralsight.
- Defined acceptance criteria with product owners and developers during sprint planning and backlog grooming.
- Built the QA automation foundation from the ground up in Python, Playwright, and Cypress, covering E2E flows and API test suites.
- Managed Xray test sets in Jira across integration, functional, system, regression, and E2E testing.
- Validated Figma-to-build UI parity and cross-device responsiveness.

Apr 2023 – Aug 2023

Addis Ababa, Ethiopia

Senior Performance Engineer

Safaricom Ethiopia

- Modeled real-world transaction mixes and concurrency levels into JMeter thread-group configurations.
- Developed and parameterized JMeter test plans; executed load, stress, and soak tests at peak volumes.
- Analyzed throughput, response times, and error rates to pinpoint bottlenecks.
- Delivered performance reports with trend analyses and SLA compliance summaries.

Aug 2019 – Apr 2023

Pittsburgh, PA, USA (Remote)

Senior Software Tester

Excellerent Solutions

Project: Presence Browser Suite — Multi-product ecosystem for web-based community building (Chrome extension, web app, embeddable SDK)

- Designed and ran API and UI automation across all three components and executed OWASP ZAP security scans.
- Built the API and UI automation framework from scratch using Rest Assured/Java/Cucumber and Cypress-in-Jenkins for continuous validation.
- Ran performance testing (smoke, load, stress, spike, soak) with k6 and mobile automation with Appium.
- Executed OWASP ZAP and Burp Suite security assessments with remediation recommendations.
- Mentored QA team members on best practices, tooling, and automation strategy.
- Key project: Hinda migration — validated ~20 incentive platforms migrating PeopleSoft to Oracle JD Edwards.

May 2015 – Aug 2019

Addis Ababa, Ethiopia

Software Tester

Information Network Security Agency (INSA)

Project: ERP System — Large-scale, multi-module enterprise system covering HR, Finance, and Asset Management

- Performed Oracle database validation using SQL and automated critical regression scenarios with Selenium WebDriver.
- Reviewed requirements and technical design documents, improving testability through actionable feedback.
- Architected a CI/CD pipeline: Jenkins + GitLab + GlassFish + JFrog Artifactory, with SonarQube quality gates.
- Built a Selenium WebDriver automation framework in Java from the ground up.

◆ EDUCATION

BSc in Software Engineering

Microlink Information Technology College, Addis Ababa, Ethiopia — 2014
